Fieldlab High Tech Software Cluster

Fieldlab High Tech Software Cluster

Digitisation of industrial products and processes.

- ▶ Virtual prototyping and design
- ▶ Artificial intelligence and machine learning
- ▶ Big data analytics and data services
- ▶ Industrial 5G and wireless communication
- ▶ Model-based software engineering
- ▶ Industrial Internet of Things

WHAT WE DO

Digitisation in general, and the fourth industrial revolution in particular, is disruptive on a worldwide scale and is leading to surprising winners and shocking losers. The difference between winning and losing lies in the understanding that digitisation is fundamentally about the use of software to stimulate innovation and in adopting a software-centric business strategy.

High Tech Software Cluster (HTSC) helps industrial companies find their way in digitisation. By realising smart products, services and business models with the help of software technology, these companies stimulate innovation and value creation. The cluster develops and delivers the competencies, products, services and knowledge that are needed for smart companies that want to win the digitisation race.

WHAT YOU CAN DO

Our members offer advice, consultancy, courses and workshops in a wide range of topics related to digitisation in the industry. In our Software Competence Centre we can show you how software can create more value for your organisation and how you can join the Smart Industry revolution.

We are happy to be your discussion partner for all issues related to digitisation in your company. We welcome new members who develop industry-related software into our community, where we have a lively, informal network of forward-looking, entrepreneurial companies.

MORE INFO?

Would you like more information about HTSC? Then please contact Wim Renders, info@hightechsoftwarecluster.nl or visit our website *www.hightechsoftwarecluster.nl*.
