

Smart Connected Supplier Network

INNOVATION PROGRAM FACTORY OF THE FUTURE

Smart Connected Supplier Network

Platform for information exchange aimed at higher productivity in the supply chain

- ▶ Data standard
- ▶ Information exchange
- ▶ Higher productivity in the chain

WHAT WE DO

Smart Connected Supplier Network (SCSN) is a data standard that makes the exchange of information in the supply chain more efficient, so that companies can share data more easily, reliably and quickly. This results in a higher productivity of the supplier chain through fast, secure and interoperable exchange of information between companies.

By registering your company with SCSN, you can exchange data such as orders, invoices, technical product data etc. with all connected companies in your production chain. You link your ERP system to one of the service providers, who will send your messages then either directly or via another service provider to the recipient.

WHAT YOU CAN DO

Companies that want to connect to the SCSN platform determine in advance what information they want to share and with which customers and suppliers. Once a service provider has been selected, a one-off connection must be made to bring the company's IT system into line with the SCSN standard and then the company can start to exchange data.

MEER INFO?

If you have questions or are interested in joining SCSN, please contact Rutger van der Male on +31(0)6 3939 8464, rutger.vandermale@tno.nl or visit www.brainportindustries.com/nl/innovatieprogramma.
